Multiphase flows are ubiquitous in the industry (particles, drops and bubbles in petroleum, nuclear engineering and energy transformations). The numerical simulation has proven to be an efficient tool for engineers and researchers to understand and model the complex interplay between the continuous phase and the dispersion of discrete elements. The purpose of lectures is to introduce numerical simulations of dispersed two-phase flows and advanced topics in computational fluids mechanics, including particle suspensions, bubbly liquids and droplet sprays. Lectures on classical numerical approaches for solving Navier-Stokes equations will be introduced, together with their applications to multiphase flows (dispersion, two-way coupling, modelling of hydrodynamic interactions). Students will be trained to program some classic examples of important phenomena. Students will work on projects using Matlab to simulate particle suspension flows, bubble and

droplet dispersion.

Fossil energy, on the one hand, the increasing tension of supplying has brought a high pressure on the sustainable socio-economic development; the other hand, the continuous consumption of fossil energy has been producing more and more greenhouse gases. In order to find a model for sustainable development of the society, the development of renewable energy is increasingly becoming a choice for the international community. Considering from our current energy production and energy consumption of the actual situation, great efforts to develop new energy and renewable energy is our future energy development strategy requirements. "China's Energy Conditions and Policies" White Paper pointed out that renewable energy is a priority to the development of China's energy field. In order to adapt to China's energy conservation and the development of low-carbon economy, this course will let students to master the country's renewable energy development plan what kind of opportunities and challenges for China to face, why low carbon society we should choice, international situation and experience on the development of low carbon economic. How should China to face the contradictions of development and reducing the emissions, energy and special population structure, how to make the strategic decision for sustainable development of economy in China. The content of this course include introduction of China's energy structure, the trend of global climate change, impacts and countermeasures, the international experience of the development of low-carbon economy, China's development strategy and technology roadmap to implement a low-carbon society with the 2020 mid-term goals and 2050 long-term goals, as well as China's renewable energy development planning and modern optical role in the development of renewable energy.

The course provides a deeper understanding of general phenomena in systems that behave essentially quantum mechanically and practical introductions to methods used to describe the behavior. The phenomena discussed include the nature of spectrum, quantum dynamics, scattering and tunneling. In addition to a survey of exactly solvable problems, a variety of approximations are introduced: from perturbation theory, semiclassical, variational to numerical simulation. General tools of the Green's functions and path integrals are also introduced and utilized.

The level is more advanced than the usual course of quantum mechanics. Several topics listed below will get discussed at a high level. The method of the perturbation theory and the variational theory in quantum mechanics will be presented at the beginning. Introductory materials to the study of the atom of helium and those with more than two electrons are then presented the next. The methods of Hartree theory, Hartree-Fock theory, and Thomas-Fermi theory are discussed; quantum mechanical many-body theory is presented but at the level of an introduction. The main topics further cover several other basics in the quantum chemistry, like the rotation and vibration of a diatom molecule and other small (and somehow simple)

molecules. The path integral approach of Feynman to quantum mechanics is discussed. The course also include the subjects on the semi-classical methods such as WKB approximation; the application of them to bound states and scattering states is discussed. The final part of this course is devoted specifically to the topic on phases in quantum mechanics. After introducing the concept of phase in quantum mechanics, we discuss their effects in the Aharonov-Bohm experiments and other important experiments. On theoretical aspect, we introduce and discuss the concepts of the Berry phase and the Aharonov-Anandan phase. The areas for the field training included Datong Basin in Shanxi Province and Qinhuangdao City in Hebei Province. In Datong Basin there are many types of landforms such as maintains, plain, rivers, alluvial fans, and different types of typical loess landforms. There are also lots of phenomena of neotectonic movements and neoteconic landforms, such as fault scarps, fault grabens or horsts, volcano cones, basaltic lava platforms or ridges. And there are also many different types of Cenozoic sediments and many good geologic outcrop sections. There are also very rich in historic and cultural scenic spots. The region is one of the most important energy sources and chemical industry of China though it is an ecologically fragile region. The region of Qinhuangdao City is a coastal region, which included almost all types of coastal landforms, typical coastal plain and unusual beautiful mountains. Qinhuangdao City is one of the most important tourist city as well as a famous historical cultural city and an important modern seaport. The two regions included most types of landforms and geomorphologic processes and evolutionary history. There is a long history of geomorphological and Quaternary and geographical research on the regions. So the regions are very idea for field training in geomorphology. In the training course the students will systematically learn the field research methods of geomorphology, which include how to collect relevant literature materials, maps and other information, draw up a plan for the field investigation and research program, how to observe, measure, analyze, research, descript and to record the results, how to analyze the materials, draw maps and diagrams, and to write the research report of the regions based on the research purpose and under the guidance of teachers. 课程简介

在当今复杂多变的全球化社会里，文化差异或被视为障碍，或被视为机遇。持“障碍”看法的人为避开问题而格外关注“不”做什么；而将文化差异当作潜在资源的 人们关注的是“做”什么来强化群体互动。当人们时常认为存在“交流问题”时，却不知道怎样分析它的真正含义。通过了解与文化相关的各种交流方式，个人能更容易地看到问题所在。如今生活在全球化社 会中的每个人不久都会认识到应对误解的方式方法在不同文化中有着巨大的差异。不论什么工作引发了这个问题，解决的过程似乎让它更令人不快。一些文化倾向于 直接的，更西方化的交流方式，而另一些文化将其视为有进攻性的，效率低下的方式。我们大多数人对自身文化的对话方式十分熟悉，但很少有机会探索其他文化的 不同形式。这个研习班的目的是了解那些我们不熟悉的交流方式，从丰富的真实案例中学习有效的交流技巧与方法。同时，通过文化调整与适应能力评估，个人了解 到自我能力的现有水平，进而有针对性的制定个人发展计划，提高在多元文化环境中工作与交流的成功率。 本课程的授课方法引进美国密集培训模式，除介绍跨文化基础理论和实践方法外，学员将有大量时间在规定的情景模拟训练中（小组项目设计，讨论，以及对矛盾事 例的观摩与反馈等）实践 所学内容。该方法在美国的各项培训中广泛使用，被证明是非常有效的应用式学习方法。 本课程共分两部分进行：第一部分，重点在介绍跨文化相关知识和个人能力的评估与训练；第二部分，侧重交流的知识与技巧的学习与实践。 本课程采用中英文交替教学。具有初中级以上英语水平并从事 / 参加各种国际教育交流项目的中外留学生，访问学者及涉外项目管理人员，企事业单位外派雇员，人 力资源海外项目开发及管理人员均可参加。

In today's complicated global community, we can view cultural difference either as a frustrating obstacle or as an opportunity. Those who view culture as a barrier may become preoccupied with what NOT to do in order to avoid problems. Those who recognize the potential resources that cultural differences bring focus on what TO do to enhance our interactions. While people often suspect that there is a "communication problem," they rarely know how to assess what that really means. By understanding culturally related communication patterns, individuals can more readily determine what may have gone wrong. All of us who live in today's global society soon come to realize that ways to handle misunderstandings differ greatly across cultures. Whatever task inspires the problem, the process used for resolving it frequently seems to make it even more uncomfortable. While some cultures prefer the direct, more western style, others consider this offensive and counter productive. Most of us are familiar with forms of dialogue in our own culture, but we rarely have the opportunity to explore styles that are used across cultures. This workshop will explore those styles, teach new skills, and suggest effective approaches to not only understanding these differences, but also bridging them. This two-day intensive course (15 hours) will focus on evaluating and training intercultural competence of adjustment and adaptation necessary to those who are studying in or working for educational and business settings, to improve their effectiveness when in a cross-cultural context. The methodology and tools that the course will employ include lecturing, group discussion/project, cultural assimilator, and responding to a critical incident, as well as conducting the Inventory of Intercultural Effectiveness Scale (IES), accompanying with a follow-up evaluation. The course follows the two following parts: The Part I focus more on the introduction of intercultural general knowledge and individual competence assessing (IES) and training; In Part II, practice on intercultural communication knowledge and skills will be intensive. The language used in the course will be both Chinese and English. So English proficiency at basic level is required for those

who enroll in the course.

跨文化系列课程：国际领导力评估与培养 Intercultural Training: Global Competence Inventory and Training

课程号：01833620 学分：1

先修课程：无

课程简介

全球领导力是一个比较新的概念。它是于上世纪 80 年代，随着商业，教育，旅游等领域里呈现出越来越强的国际合作趋势，以及信息产业的快速发展，人们注意到 在复杂多变的全球化环境下，组织和个人的适应力与领导能力已成为事业发展和成功所不可避免的一个重要因素；越来越多的跨国企业人力资源部门，国际合作组织 和机构已将全球领导力作为企业和人员培训重点及聘用的考察标准之一。这个现实环境不仅给国家和组织，也给个人的发展带来了机遇和挑战。一方面，当国家和文化地位在国际社会中日益提升，国际经验积累和跨文化能力培养是个人生存与发展的迫切需要；另一方面，个人在跨国，跨地区和跨文化组织中运用全球领导力对团队或群体产生积极影响，是全球化环境中组织发展的必然要求。从 90 年代开始，西方国家对成功领导者及其能力的研究越来越多，美国因其国内多文化社会环境及其多方位国际合作，在这方面的研究与测评工具开发已成熟，非常值得我们借鉴。本课据此设计为三个部分：第一，我们会详细介绍一些前沿研究成果，特别是那些对我们个人生活和事业十分重要的具体的领导能力及其培养方法，例如，个人领导力，全球意识和视野，抗压能力，灵活应变能力，解决问题能力，多元文化团队管理能力等等；另一方面，我们也看到，在一个国家适用的某种领导方式在另一个国家却很失败，其中很大的一个原因是文化差异。因此，在第二部分，我们会比较不同文化在领导力问题上的共识与差别，从许多真实，有趣但寓意深刻的故事中发现适合我们自身需要的培养方式和目标。任何能力的培养都要从了解自我开始。为此，在第三部分，学员将有机会对个人能力进行测量，了解现阶段所处的水平，并尝试制定相应的个人发展计划。总之，全球领导力概念不仅是对领导者，也对每个人在全球化社会中的生存与发展十分重要。因此，在介绍概念的同时，课堂辩论，挑战模拟，案例观摩等丰富的教学活动会帮助理解所学到的知识，以及运用方法。

The concept of Global Leadership emerges when the rapid increase of cross-national cooperation in business, education and tourism, as well as the remarkable development of information industry in 1980's. Encountering more unfamiliar, complicated and unexpected changes in the globalized environment everyday, people have realized more clearly that the competence of adaptation and leadership has appeared to be an important issue to everybody. Human Resource Departments of those cross-national enterprises, varieties of international institutions and organizations have taken individual's global competence as one of their focuses in employment and training. Undoubtedly, globalization has brought countries, organizations and individual great opportunities, as well as challenges. Since 1990's, the studies on effective leadership have increased in many Western countries, especially the US, due to its domestic multicultural environment and broad

international cooperation. The course will first, introduce its definitions, and primary theories, especially those related to our practice in reality, including competences and developing methods, for example, personal leadership, global views, resilience, flexible adaptation, problem solving, management of multi-cultural teams, etc. On the other hand, we also notice that a leadership accepted commonly in one country is not necessarily a good one in another. One of the reasons is cultural difference. Therefore, in the second module, we will see the leadership competence globally identified and compare those different in diverse cultures. Many real, interesting and meaningful cases will be used to help find what we need and what we should develop. Any competence is developed starting with self-awareness. In Module Three, students will have the opportunity to measure what competence they have had, and what level they are at, in order to make a pertinent individual development plan. In all, global leadership is related to not only leaders and organizations, but also individuals. In class, students will not only learn the concepts, but also experience various practical teaching /learning methods such as group discussion, scenario simulation, video watching, plan designing, etc, to help understanding and practice. The course will include three (3) modules: Module One, General introduction of Global Leadership; Module Two, Comparison of leadership competence in different cultures; and Module Three, Assessment (GCI) and individual development plan. The language used in the course will be both Chinese and English. So English proficiency at basic level is required for those who enroll in the course.

Introduction to the course topic, Constructing Intercultural Communication for Global Citizens Faculty: Milton J. Bennett, Ph.D. Intercultural Development Research Institute, USA & Europa University of Milano Bicocca, Italy “Communication” is the mutual creation of meaning and “culture” is the coordination of meaning and action in a group. Thus, “intercultural communication” is the mutual creation of meaning across cultures. This means that intercultural communication is the mechanism whereby people of different groups perceive and try to make sense of one another. While there is no guarantee that people will be respectful of the

differences they encounter in this process, it is certainly a criterion of good communication that people seek to understand the intentions of each other in non-evaluative ways. For that reason, intercultural communication incorporates particular strategies that encourage us to attribute equal humanity and complexity to people who are not part of our own group. The course will from the two parts explain how to Construct Intercultural Communication for Global Citizens Part One: Global Business Management/Leadership Part Two: International/Multicultural Education.

Cognitive science studies the human mental world. Economic activity is an experiment with the largest scale human being has ever run, and each individual market participant serves as an active observer. This course introduces an integrated theory of economics and cognitive science - its fundamental principles and modeling methods. Economics and cognitive science of 20th century were developed within the framework of Newtonian physics. For the interdisciplinary study of the 21st century, the integration of economics and cognitive science requires to go beyond the limitation of Newtonian tradition. This course will introduce a series of integrated models to characterize sub-economic analysis, monetary economics, economic policy, Pareto efficiency, dynamic market, “invisible hand”, etc. The course is designed as self-contained without prerequisites. It starts from establishing basic concepts and then gets into frontline topics. Special efforts will be made to make sure anyone interested can follow the lectures, study systematic knowledge, and understand the characteristics and methods this interdisciplinary approach. This course have been developed and taught at Rensselaer Polytechnic Institute (UAS) for many years and at Tsinghua University, People’s University of China, and Zhongshan University in recent years. It attracted wide interests from American and Chinese students and teachers from all different majors and received high course ratings.

生物特征识别 Biometrics

课程号：04831950 学分：2

先修课程：无

课程简介

信息化时代的一大特征就是个人身份的数字化和隐性化。如何准确鉴定一个人的身份，确保安全是当今信息化时代必须解决的一个关键性社会问题。目前，我国乃至世界的各种身份管理大部分使用证件、磁卡、IC 卡和密码，这些手段无法避免伪造或遗失，密码也很容易被窃取或遗忘。这些都给管理者和使用者带来很大不方便。基于生物特征识别的身份验证可以避免这些麻烦。因此，有越来越多的研究者投身于这个领域，工业界也有了越来越多的产品。2003 年 5 月，香港特区政府签发了第一张存储指纹特征的智能身份证，2003 年 11 月，英国内政部也开始实施一项为期 6 个月的电子生物特征身份识别技术的试点，以便为将来在全国范围内推出新型身份证系统做准备。美国政府也自 2004 年初开始对所有出入境的外国公民采集双手食指指纹，用以防范恐怖袭击增强国土安全。显而易见，生物特征识别技术将在法律、安全、金融、商业、军队以及各种涉及身份认证的场合大有作为，正如比尔·盖茨曾作的断言那样，生物特征识别技术将成为未来若干年 IT 产业的重要革新。在本课程将系统的介绍生物特征识别技术的来源，发展和现状，教授学生相关领域的知识，拓展学生的视野，培养研究兴趣，通过课堂讲授，演示和组织学生阅读领域内的书籍和论文，引领学生去学习和掌握生物特征识别领域的基本知识与技术，为学生独立展开研究工作打下坚实的基础。

工程科学研究方法 Workshop on Engineering Research Methodologies

课程号：04832330 学分：2

先修课程：无

课程简介

科学研究是大学教育中的重要组成部分之一。目前的大学课程中很少涉及对科学研究方法的系统介绍。通常，低年级的本科生和研究生通过跟着高年级的同学进入项目研究，在此过程中自己总结实验技巧和研究方法。这种学习方法通常效率较低，并需要较长的时间才能够真正掌握有效的研究方法。面向刚刚或者即将开始参与科学研究的学生，本课程将以课题讲授和讨论的形式，重点介绍学生感兴趣的科学研究过程和研究方法。学生通过课程学习，能够比较系统地掌握现代科学研究所需要研究方法，为以后的科研工作打下坚实的基础。

Research is a very important education component in university. However, systematic approach to perform research has seldom been covered in normal university curriculum. Undergraduate and post-graduate students are used asked to perform research following their senior colleagues and pickup the skill by themselves. Given the many concerns of those confronted by a first-time research responsibility, this special workshop is intended primarily for students, both graduate and

undergraduate, who have not experienced research but want to know more about the process and methods of research. It is a workshop style class with both lecture and discussion.

集成电路静电放电保护方法 Electrostatic Discharge for Integrated Circuits

课程号: 04832800 学分: 2

先修课程: 电子线路, 半导体物理, 半导体器件物理

课程简介

静电放电 (Electrostatic Discharge, ESD) 是指电荷在两个不同电势物体之间转移的过程。公元前六世纪, 古希腊人发现琥珀摩擦后能够吸引轻小物体, 其实就是自由电荷在物体之间转移的 ESD 现象。在自然界中, ESD 现象无处不在、无时不有。ESD 过程会产生瞬时高压和大电流脉冲。例如, 干燥的冬天带电的人体接触金属把手时的 ESD 现象, 有电击触觉时冲击瞬时电压大约为 3000V, 能听到放电声音时大约为 5000V, 能看到放电火花时大约为 8000V。对于集成电路而言, 从芯片加工、封装、运输、系统集成以及用户使用, 所有过程都有可能产生 ESD 现象。ESD 所产生的瞬间高压和大电流脉冲会通过芯片管脚流经芯片内部, 从而导致芯片内部电路损伤而无法正常工作。根据美国可靠性分析中心统计, 在所有电子设备的硬件故障中, ESD 冲击导致的失效占 15%, 而对高静电敏感的集成电路这一比例高达 60%。全球每年因 ESD 对电子设备和系统所造成的损失高达 450 亿美金。集成电路技术近五十年来一直沿着摩尔定律高速发展。一方面, 随着集成电路器件特征尺寸的不断减小, CMOS 器件的超薄栅氧化层、超浅结深、多栅立体结构、Silicide 等先进工艺技术的引入, 在提高了 CMOS 器件的工作速度和集成度的同时却使 CMOS 器件局部产生更高的电流密度、电场密度和热量, 大大降低了它们的抗 ESD 冲击能力。另一方面, 任何一种 ESD 保护结构都带来一定的寄生电容、电阻和电感。这些寄生效应会对其保护的内部电路性能造成一定的负面影响, 例如输入/输出阻抗失配、噪声耦合、破坏信号完整性、时钟延迟、功耗等问题。这种影响对于射频 (RF) 和高速数字电路的影响尤为严重。因此, ESD 保护技术一直是集成电路可靠性问题的研究重点和热点。“集成电路静电保护方法”这门课程将针对 ESD 保护技术这一微纳电子和集成电路领域的研究热点, 面向微电子和电子专业的高年级本科生, 主要讲解 ESD 相关工艺、器件、电路、系统和测量技术。通过这门课的学习, 学生将有如下收获: 了解 ESD 冲击模式、失效机制、规格标准、测试方法等基本概念; 重点学习二极管、MOS 管、SCR 管等 ESD 保护结构的器件、电路和版图设计方法, 输入/输出管脚 ESD 保护电路、电源钳位电路以及全芯片 ESD 保护的设计方法; 学习 RF 电路与 ESD 协同设计方法; 了解 SOI、FinFET、TSV 等新工艺、新器件的 ESD 设计。

Electrostatic discharge (ESD) is the sudden flow of electricity between two electrically charged objects caused by contact. IC 600 BC, Greeks discovered ESD phenomenon in basic experiments, where they rubbed Amber with a piece of fur and observed attraction of lightweight objects to the Amber. In nature, ESD issues are everywhere and whenever, which are a transient process associated with high voltage and high current. In a dry winter day, ESD occurs, for example, when a charged human body touches a metallic knob. If you feel a shock, ESD voltage is about 3kV. If you hear a popping sound, ESD voltage is about 5kV. And if you see a spark, ESD voltage is about 8kV. ESD issues randomly and frequently occur in the whole procedures of integrated circuits (ICs) industry, including manufacturing, packaging, transporting, system integrating, and user applying. The high energy associated with ESD issues could lead to the gate dielectric breakdown and the pn

junction burnout. Statistics from the RAC indicate that about 15% of all electronic component and system failure might be attributed to ESD, and up to 60% for ICs. In nearly fifty years, IC technology follows Moore's Law dramatically scaling down. However, the ESD robustness of the ICs is terribly degraded by the advanced CMOS techniques, such as shorter channel length, thinner gate oxide, shallower junction, 3-D multi-gate structure, and silicide diffusion technique, which will induce CMOS device to increase current density, field intensity and heat energy. Moreover, an ESD protection device is associated with some parasitic effects, such as capacitor, resistor and inductor. Such an inevitable ESD-induced parasitic effect has a substantial impact on high-speed digital and RF ICs performance, such as, clock delay, signal integrity, I/O impedance matching, and power efficiency. Apparently, ESD protection design for ICs is the immediate area of ICs reliability research focus. This course is designed for the junior students in Microelectronics and Electronics, who intend to working in the field of ICs design and electronic system design. We try to present ESD issues associated with technology, device, circuit, system, measurement. This effort attempts to do the following: the ESD basics including ESD testing models, failure mechanism, and measurement methods; the ESD device design of diode, MOSFET, and SCRs; the I/O ESD protection circuit and power clamp circuit design; the "ESD-circuit" co-design methodology for RF circuit; and the approach ESD design for advanced CMOS technique including SOI, FinFET and TSV.

The objectives of the course are to teach the theory and methodology of socioeconomic surveys, and by involving students in the fieldwork of a real survey (China Health and Retirement Longitudinal Study, CHARLS) help students to gain a deep understanding of the livelihood of ordinary Chinese people and sharpen the skills

necessary for their future careers, including the ability to cope with adversities, communication skills, the ability in observing, thinking and solving problems, and team work. This course will use the CHARLS survey to teach the theory, methodology and technology of socioeconomic surveys and give students the opportunity to practice their survey skills in field survey. The course is divided into two parts. One is classroom teaching, focusing on the theory, methodology and technology. Students will grasp the content of the CHARLS questionnaire and learn the techniques of interviews. The second part is real world practice. The CHARLS questionnaire is very comprehensive, covering areas of demographics, family composition and intergenerational transfers, health status, health insurance and health services utilization, employment, retirement and pension, income, expenditure and assets. Each household interview is expected to last about three hours. Thus it is a highly professional questionnaire an important part of the classroom teaching. After classroom teaching there will be small practice sessions scheduled each week to allow students to practice their skills and simulate interviews. During the actual fieldwork students will be grouped into small teams.

Course ID: 30340030 Credit: 3

Language: English

Pre-requisites: No pre-requisites

Introduction

This course introduces the history of the Silk Road — a complex network of trade routes that connected China and Rome over land and sea — and examines the cultural and material exchanges between the peoples and cultures it connected. The course covers the period 500 BCE to 1500 CE, during which forces wielded by many peoples (e.g., Chinese, Greeks, Persians, Arabs, Turks, and Mongolians) shaped the geopolitical landscape of Asia. It explores the roles played by the Silk Road in forming and transforming the cultural, ethnic, and religious identities of these peoples and their perceptions of one another. It highlights such themes as conspicuous consumption, cultural diversity, religious pluralism, and nomadic migration, as well as the financial, judicial, religious, and social institutions that were the fruits of these extended exchanges. The course begins and ends with an analysis of conceptualizations of the “Silk Road” against the backdrop of the “Great Game” that played out in the late 19th and early 20th centuries among various colonial powers as well as its legacy to this day.
